

Day 6 Deployment Preparation and Staging Environment Setup

I choose to follow the same project which we got in December 2024 and I have used sanity.io at back-end. Before the deployment I run the build to know the errors which I may have on vercel while deployment. Here I am listing few of the error/warning which I have faced at the time of deployment of my project name newyear on vercel. I have faced several issues during coding and few of them are

ERROR/WARNINGS FACED DURING DEPLOYMENT OF PROJECT ON VERCEL

I have received warning for not using Nextjs compliant image tag at various places in my coding. It asked me to give width and length of the smallest image I used in coding.

I have received warning for creating a file on wrong address such as I created a file in app by the name of cart.tsx infact I commented all the codings in that file, but vercel asked me to delete that file at all.

Also vercel asked me to delete the irrelevant imports in page.tsx files.

One of the warnings I have received is not assigning value to export default in typescript file of product.ts, order.ts, cutomer.ts and invoice.ts

The above are the warnings/errors which I have faced before successful deployment of Furniro project.

USING OF ENVIORMENTAL VARIABLES IN VERCEL:

I have carefully provided environment variables from .env.local , sanity.io and clerk.js to vercel environment variable section for seamless running of application

I FACED DIFFICULTY IN PUSHING CODE THIS TIME:

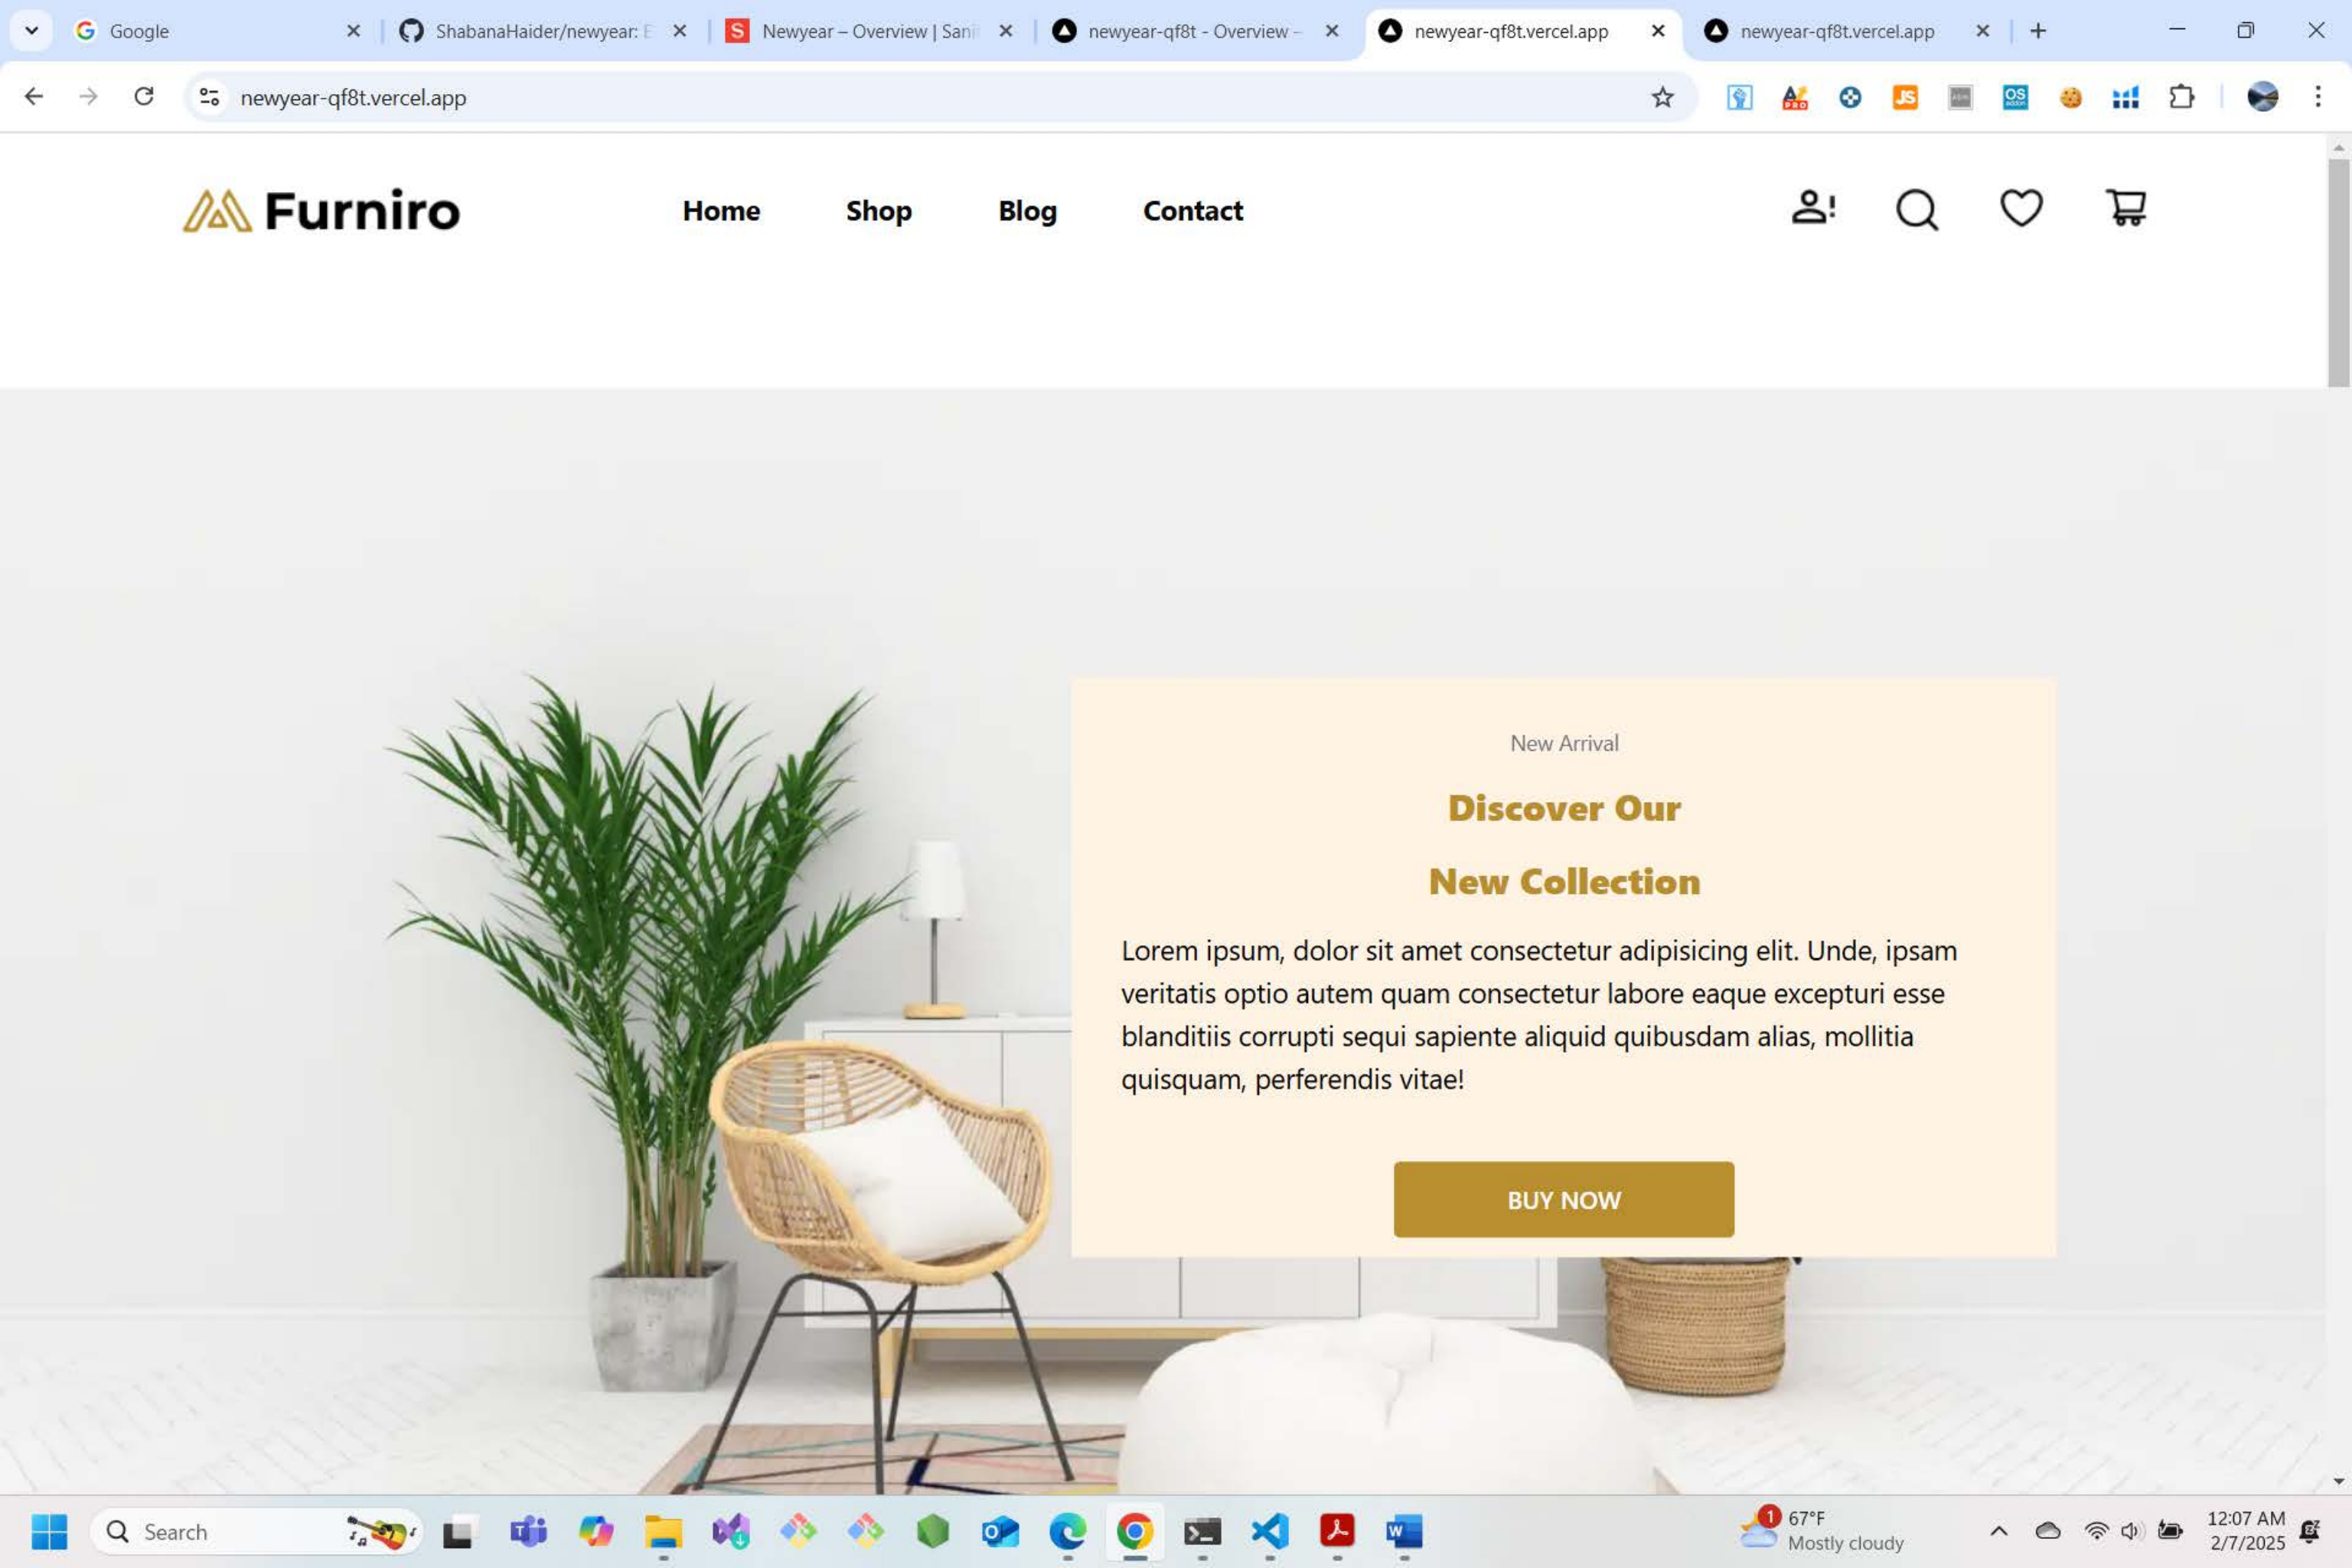

Normally after commit in VS code, the changes reflect in github and automatically in vercel but this time despite successfully commit of code and proper reflecting of updated code , the code was not pushed at vercel. I used commands in VS code to push codes to vercel and that worked.

WORK IN PROGRESS:

I have completed a project till placement of order and now my next target is integration of payment method strip or any other local gateway and shipping engine.

I have set up Admin dashboard and start working to manage inventory movement, orders status, customer information, invoices and sales report but it is taking a little more time. I have tried to adhere to basic UI provided for template 6 and by the passage to time I will try to bring more improvement both functionality wise and presentation wise.

Please find the screenshots of Furniro Furnisher project which Nextjs name is newyear which describes the working of the core functionality as planned in the 2 day of hackathon.
